PROFESSIONAL SUMMARY

Software Engineering graduate specializing in Human-Computer Interaction (HCI), with practical experience designing, researching, and building end-to-end digital platforms — from UI/UX design and behavioral research to data analysis and system integration. Skilled in translating user needs and business goals into functional interfaces, backed by usability testing, persuasive and behavioral design principles, and data-driven evaluation. Experienced working across the full product lifecycle: research, design, development coordination, and quality validation.

WORK HISTORY

03/2025 - 08/2025 **IT Department Cooperative Trainee**
Al-Khayyat Group - Jeddah, Saudi Arabia

- Analyzed operational systems across Sales, Warehouse, and HR by observing workflows and reviewing malfunction reports; identified recurring issues (delayed updates, login errors) in a written analytical report.
- Designed and iterated a complaints-reporting interface in Figma — from wireframes to an interactive prototype — based on direct employee feedback, simplifying navigation and reducing submission steps.
- Managed IT department tasks using Trello, applying Agile-style prioritization (urgent / routine / completed); entered and validated operational data, correcting duplicate entries.
- Built a short- and long-term IT improvement roadmap and measured UX metrics (time on task, error rate, satisfaction), showing measurable improvement over the baseline.
- Completed training within the central IT department of Al-Khayyat Group, supporting Sales, Warehouse, and HR operations.

SKILLS

- **UX/UI Design:** Figma, wireframing, prototyping, information architecture, interaction design
- **Research & Testing:** usability testing, user interviews, surveys, A/B testing, UX metrics (time on task, error rate, satisfaction**)**
- **Persuasive Design**
- **Data Analysis:** Excel, SQL, Power BI, data validation & cleaning
- **Technical:** HTML, CSS, JavaScript, front-end/back-end integration, Firebase**,** Subease
- **Collaboration:** Agile task management (Trello), cross-functional teamwork, end-to-end project coordination

EDUCATION

06/2021 - 06/2026 **Bachelor of Software Engineering**: **Human-Computer Interaction**
Umm Al-Qura University - Makkah, Saudi Arabia

- Held trainee role with BFS Academy.
- Held trainee role with KAUST Academy

CERTIFICATIONS

- Business Etiquette and Professionalism - BSF - 2024
- Managing Performance - BSF - 2024
- How to Negotiate - BSF - 2024
- Business Etiquette and Professionalism - BSF - 2024
- What is Excellence in Customer Care - BSF - 2024

PROJECTS

Emtithal (امتثال) — Digital Compliance Assistant — *Graduation Project*
A system helping Saudi government entities evaluate their digital platforms against the Saudi Digital Government Platforms Code (كود المنصات), combining a browser extension that scans UI elements for compliance issues with a web dashboard that tracks compliance scores — replacing a manual audit process with an automated, data-backed one.

- Owned end-to-end coordination, ensuring the extension and web platform worked together as one complete, functioning product; led integration between front-end (extension UI, dashboard) and back-end (scanning logic, reporting engine).
- Performed data analysis on compliance evaluation results and conducted testing/research to validate accuracy and usability.

cCourses — Persuasive UX E-Learning Platform — *Team Project (Coursework)*
A conceptual e-learning platform exploring how behavioral and persuasive design techniques influence user decisions across the purchase journey — each screen built around a principle such as scarcity, social proof, or authority cues.

- Designed the Home page and Profile page in Figma, applying social proof (reviews, ratings), progress feedback, and personalized encouragement to increase engagement, as part of a documented 9-screen prototype.

Car Booking Platform with Smart Filtering — *Team Project*
A car rental/booking application allowing users to search and filter vehicles by type, price, and availability, backed by real functional data rather than a static mockup.

- Designed the UI/UX for the booking and filtering experience, and connected it to a live Firebase database for real data storage and retrieval.
